Remote Desktop Client access to Ansys Computer

Please consider the following:

Academic ANSYS Program(s) may only be accessed and used by Licensee at the Designated Site or any other location within a 50 mile radius of the Designated Site (UA, Universiteitsplein 1, 2610 Wilrijk), provided that such location is within the same country as the Designated Site. This limitation applies to any access and/or use of the Academic Program(s), including, but not limited to, access via a VPN connection or through license borrowing.

Remote Desktop Connection can be problematic for displaying 3D models, especially of the client computers not supporting OpenGL graphics. Pre- and Post processing can best be done on the server workstation itself.

On a Windows XP computer:

Start -> All Programs -> Accessories -> Communications -> Remote Desktop Connection

Password: contact the administrator (sam.vanwassenbergh@ua.ac.be)

(Remote Desktop session will be ended if the administrator is logging in on site)
