**PODARCIS MELISELLENSIS** (Dalmatian Wall Lizard). **PREDATION.** On 5 May 2017 at 1457 h, one of us (BB) observed and photographed an adult Hooded Crow (*Corvis cornix*) successfully catching, and ultimately eating, an adult Dalmatian Wall Lizard, *Podarcis melisellensis*. The act of predation took place at the harbour of Vis, a small Croatian island in Adriatic Sea (43.0616°N 16.1837°E, WGS 84). Neither the bird nor the lizard was collected, but their respective color patterns readily distinguished them from any related taxa recorded in the region (Kryštufek and Kletečki 2007. *Folia Zool.* 56:225-234; Kralj and Barišić 2013. *Nat. Croat.* 22:375-396). This observation provides us with a broader insight into the potential predatory threats insular lacertid lizards are faced with.
